Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 January 2002.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-25 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.

DETAILED ACTION

This application, 10/061,459, has been examined. Claims 1-25 are pending.

Specification

1. Applicant is reminded of the proper content of an abstract of the disclosure.

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains. If the patent is of a basic nature, the entire technical disclosure may be new in the art, and the abstract should be directed to the entire disclosure. If the patent is in the nature of an improvement in an old apparatus, process, product, or composition, the abstract should include the technical disclosure of the improvement. In certain patents, particularly those for compounds and compositions, wherein the process for making and/or the use thereof are not obvious, the abstract should set forth a process for making and/or use thereof. If the new technical disclosure involves modifications or alternatives, the abstract should mention by way of example the preferred modification or alternative.

The abstract should not refer to purported merits or speculative applications of the invention and should not compare the invention with the prior art.

Where applicable, the abstract should include the following:

- (1) if a machine or apparatus, its organization and operation;
- (2) if an article, its method of making;
- (3) if a chemical compound, its identity and use;
- (4) if a mixture, its ingredients;
- (5) if a process, the steps.

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

3. The abstract of the disclosure is objected to because it exceeds the 150 word limit. Correction is required. See MPEP § 608.01(b).
4. The disclosure is objected to because it contains embedded hyperlinks and/or other form of browser-executable code. Applicant is required to delete the embedded hyperlink and/or other form of browser-executable code. See MPEP § 608.01.

Claim Objections

5. Claims 1, 18 and 22 are objected to because of the following informalities: Pursuant to claim 1, at step e), replace "determine" with - -determined- -. Pursuant to claim 18, step a) is already included in claim 2; the claim 18 step must be uniquely identified. Pursuant to claim 22, after "program", delete "for producing" and insert - - which when executed by the computer produces--. Appropriate correction is required.
6. Claim 21 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Neither claim 18 nor claim 2 recites the limitation of "retrieving the replacement sub-network".

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Rejection of claims 1-5, 18 and 22-25

8. Claims 1-5, 18, and 22-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Allen et al., U.S. Patent 6,574,779.

9. Pursuant to claim 1 which recites, [A] method for producing a circuit description of a design, the method comprising a) from the design, selecting a candidate sub-network that includes multiple elements (col. 2, ll. 22-26, schematic subgraph); b) generating a parameter based on a set of output functions performed by the selected candidate sub-network (col. 2, ll. 46-47 (matching criteria, parameter rules); c) using the parameter to retrieve a replacement sub-network from a storage structure that stores replacement sub-networks (col. 4, ll. 45-47, parameterized pattern library); d) determining whether to replace the selected candidate sub-network with the replacement sub-network in the design (col. 2, ll. 52-54); e) if determined to replace the selected candidate sub-network, replacing the selected candidate sub-network with the replacement sub-network in the design (col. 2, ll. 49-52).

10. Pursuant to claim 2 which recites [A] method for producing a circuit description of a design, the method comprising a) from the design, selecting a candidate sub-network that includes multiple elements (col. 2, ll. 22-26); b) generating a parameter based on a set of output functions performed by the selected candidate sub-network (col. 2, ll. 46-47 (matching criteria, parameter rules)); c) using the parameter to retrieve a replacement sub-network from a storage structure that stores replacement sub-

networks (col. 4, ll. 45-47, parameterized pattern library); d) replacing the selected candidate sub-network with the replacement sub-network in the design (col. 2, ll. 49-52).

11. Pursuant to claims 3-5, further comprising identifying a set of output functions performed by the sub-network which includes one or a plurality of output functions (col. 9, ll. 32-50).

12. Pursuant to claim 18, wherein there is an evaluation to determined whether to replace the candidate sub-network with the replacement sub-network (col. 2, ll. 52-54).

13. Pursuant to claim 22, it recites the limitations already rejected by claim 1, and further incorporates the limitation of a computer readable medium storing a computer program for performing the claimed method (Fig. 4).

14. Pursuant to claims 23-25, wherein the set of output functions includes one or a plurality of output functions (col. 9, ll. 32-50) and wherein the candidate sub-network has multiple circuit elements (col. 3, ll. 47-64).

Allowable Subject Matter

15. Claims 6-17 and 19-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

16. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Please reference the PTO-892 for a complete listing.
